**A Tikka offers
the user
more than
other rifles!**

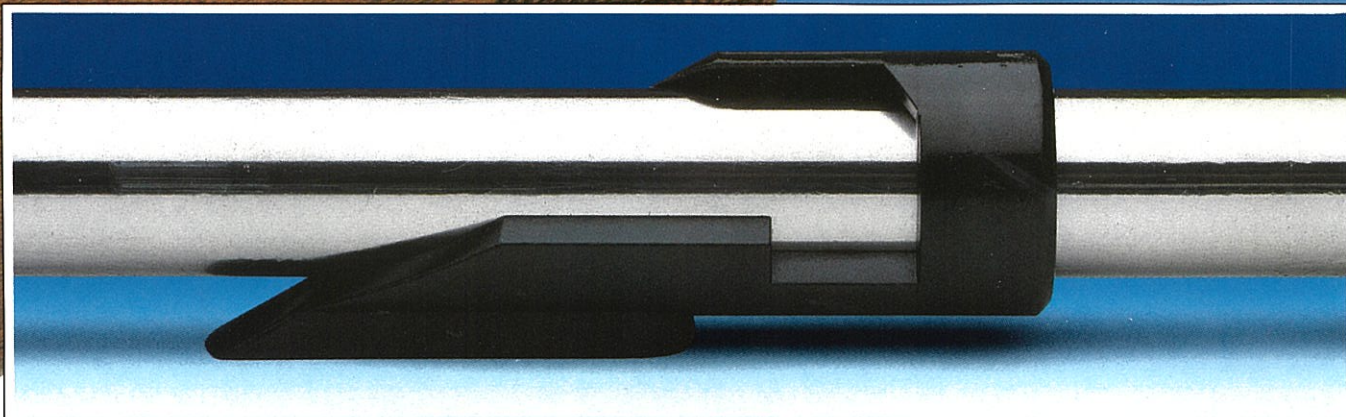

TIKKA-Bushing® gives excellent performance.

The Tikka M558/658 hunting rifle is a totally new design right down to the last detail. The rifle is designed according to the needs of the user and the main goals have been the pleasantness of use and reliability.

The smooth and quiet operation of the Tikka action makes the rifle easy and safe to handle even in rapid hunting and target shooting situations.

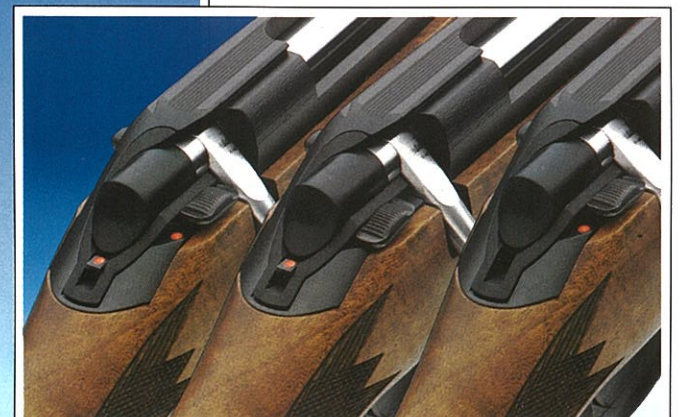

Constructed of the finest materials available and possessing excellent balance, the Tikka is easily the hunter's best choice!

The movement of the bolt is very smooth thanks to a separate guide bushing (TIKKA®-Bushing) with glass fiber strengthened polyarylamid. This material has been tested in army use and also in many other extreme conditions.

The Tikka trigger mechanism has no free pull and is reliable and pleasant to use. Lengthways grooves in the trigger provide an excellent firing grip under all conditions. The trigger guard is of shock-proof safety material.

The safety has three positions: rifle cocked and the safety in the "OFF" position (left), rifle cocked and safety engaged (centre) and the carrying position (right). The red warning dots are easy to notice and it is also simple to check if the weapon is cocked by feel, using one's fingertip.

The choice is yours: Tikka Standard or Deluxe!

Tikka M558/658 hunting rifle comes in two basic models – Standard and Deluxe – and both models offer the same choice of actions and calibers. The technical details and various options are listed on the back cover of this brochure.

The Tikka Standard is a competitively priced rifle, which differs from the Deluxe by the stock. Also the receiver and the barrel are less polished. The barrel on both models is free-floating type:

The walnut stock of the Tikka Deluxe has a roll-over cheek piece and is decorated with rosewood on the tip and pistol grip. The stock is perfectly shaped to provide comfortable and solid grip when firing.

The single column clip magazine is reliable, quiet and easy to insert. When removing the magazine, simply press the catch and the spring pushes magazine out. Rifles have a capacity of 4 rounds (1 in chamber, 3 in magazine). A five round magazine is available for M658 (not M658 Mag).

The sights of each Tikka rifle have been set at the factory to shoot at a distance of 100 metres. Windage adjustment can be made by adjusting the rear sight. The front sight is also simple to replace should a bead of different height be required.

Special rifles: Tikka Continental and Battue.

The stocks of all Tikka rifles are made from top-quality walnut on machines developed for modern series production – but each stock is individually chequered and assembled for the perfect hand-finish.

All rifles have to go through the absolute quality control process and test shooting. These operations are controlled by the international organization (C.I.P.). Another good reason to trust the Tikka!

NEW!

Tikka Continental

The Tikka Continental is basically a heavy-barreled rifle that is ideal for both target shooting and hunting. The design of the stock and pistol grip makes the rifle suitable for both right and left handed shooters. The stock length and heelplate angle can be easily adjusted with handy distance and angle pieces.

Tikka Battue

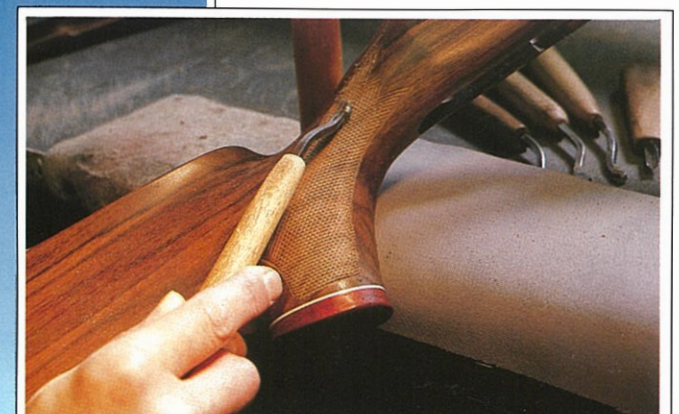

The Tikka Battue has special sights for snap-shooting. Shorter barrel. French style.

The rifle factory uses the latest ultra modern computer controlled machinery, making all the small parts of the rifles.

Each Tikka rifle is a demonstration of the professional stocker and gunsmith's skill. Workmanship and materials of unrivalled quality guarantees that Tikka rifles will perform reliably and accurately.

The hand-checked stock ensures that your Tikka is a personal rifle. Each Tikka rifle is the product of the latest technology with a highly professional workforce.
